

QUTAIBA ALDANDACHI

Fullstack Developer

Karlskrona, Sweden | 076-640-00-78 | qutaebadandashi@gmail.com | linkedin.com/in/qutaiba-al-dandachi | github.com/Qutaeba89

PROFILE

Fullstack Developer with 4 production-grade applications shipped, 1,000+ automated tests written, and two internships completed in the Swedish tech industry. Graduated from Campus Värnamo's Java & Fullstack Developer programme (YH), May 2026. Specialised in Next.js, TypeScript, PostgreSQL, and security-hardened backend systems. Comfortable taking a project from blank repo to live VPS — including CI/CD, containerisation, and security hardening.

TECHNICAL SKILLS

BackendNext.js, TypeScript, Node.js, Java, Spring Boot, REST API, Prisma ORM, Drizzle ORM, PostgreSQL, MySQL, SQLite, Redis

FrontendReact, Next.js, Tailwind CSS, TypeScript, JavaScript, HTML5, CSS3, Framer Motion, Chart.js

DevOpsDocker, Kubernetes, Docker Compose, Linux, Git, GitHub Actions, CI/CD, PM2

SecurityJWT (jose), Argon2, Iron-Session, RBAC, Rate Limiting, CSP nonces, Zod, TOTP 2FA, AES-256-GCM

TestingVitest, Playwright, Integration Testing, E2E Testing

ToolsStripe, Sentry, WebSocket, i18n, Figma, Agile/Scrum

PROFESSIONAL EXPERIENCE

Frontend Developer (LIA 2) | CM Client — AI Condition Monitoring Dashboard*Feb 2026 – May 2026*

Built a real-time industrial monitoring dashboard for AI-powered camera detection on conveyor belts.

- Developed WebSocket-based live feed with three explicit connection states (Live / Reconnecting / Offline), eliminating silent failure modes that previously blocked operator response
- Containerised the full application with Docker and deployed to Kubernetes, delivering production-level high availability within the 4-month placement period
- Implemented bilingual i18n (English/Swedish) using Next.js, enabling deployment to two target markets from a single codebase with zero code duplication

Fullstack Developer (LIA 1) | Mindact Solutions AB — AIBites*Oct 2025 – Jan 2026*

Co-developed an AI microlearning platform as one of two developers across the full stack.

- Designed layered architecture (repository → service → security layer) in Next.js 15, keeping all business logic independently testable
- Built role-based access control for 3 roles (system owner, company admin, employee) with middleware route guards — zero unauthorised access in test coverage
- Wrote a comprehensive Vitest test suite covering all architectural layers, enabling safe refactoring across the 4-month build

PROJECTS

Dar-AI-Alson — Language Institute Management System · **Deployed**Next.js 16 · Prisma/PostgreSQL · Iron-Session · Redis ·

Docker · Kubernetes · Vitest · Sentry

github.com/Qutaeba89/Dar-AI-Alson

- Architected and shipped a full-stack multi-tenant platform solo — student enrolment, CEFR-aligned adaptive placement testing, anti-cheat online exams, multi-currency payments, and multi-branch administration
- Secured with AES-256-GCM encryption, CSP nonces, HTTP-only Iron-Session cookies, and per-endpoint rate limiting; no known security issues in production
- Built payment workflow covering installment plans, refund cap controls, and daily financial close reconciliation with approval flow
- 1,000+ unit and integration tests with Vitest plus Playwright E2E; containerised and deployed via Docker and Kubernetes to VPS with PM2

Alhambra Beauty — Luxury E-Commerce Platform · **Deployed**Next.js 15 · Drizzle/Neon · JWT (jose) · Argon2 · TOTP · Tailwind · Framer Motion

github.com/Qutaeba89/Alhambra-beauty

- ▶ Built and deployed a production-grade luxury cosmetics e-commerce platform with dual-currency pricing (SYP/USD) and full RTL bilingual support (Arabic/English)
- ▶ Custom JWT auth with 15-minute access tokens, 7-day transparent refresh rotation, TOTP 2FA, and Argon2 password hashing
- ▶ Progressive IP-based rate limiting (15 min → 1 hr → permanent block) and CSP with strict-dynamic nonce scripts

Personal AI Coding AgentClaude API · OpenAI API · MCP · Custom Prompts & Tools

- ▶ Built and maintain a personal AI coding assistant with custom system prompts, MCP tool integrations, and automated workflows — actively used to accelerate daily development

EDUCATION

Java Developer (YH) — Yrkeshögskoleexamen | Jönköping University, School of EngineeringAug 2024 – May 2026

2-year Higher Vocational Education programme · 400 HVE credits · EQF Level 5 · Completed 31 May 2026. Courses: Object-Oriented Programming with Java (Pass with distinction), Advanced Java Development, IT Security & Development Methods, Java Development for Web, REST API, agile methods, test-driven development. Certified occupations: Application Developer · Java Developer · System Developer · Web Developer.

CS50: Introduction to Computer Science | Harvard University (Online)2023

Data structures, algorithms, web development, databases.

LANGUAGES

Swedish: Professional proficiency

English: Professional proficiency

Arabic: Native
